Networks and The Internet		Internet Explorer, let us look at different pages on the internet.	your internet website.

-Networks can also connect to other networks in different places, using a router. -The internet is a network of networks that are all connected together.

-Networks connect different devices to one another, allowing for information sharing.

**Router:** A router is something that finds a route between networks, connecting them.

**The Internet:** The internet is a network of networks, that is used around the world to share information and communicate.

**Protection:** Networks have security features that mean they can block or allow messages and requests. This means that information and data can be kept safe.

## **Ownership and Reliability**

-The content on the internet may belong to different people or companies, for example the person who wrote it or the company who published it.

-The content may be copyrighted, meaning that others cannot copy or use it without permission.

-Not all of the information that we see or hear on the internet is reliable. Some of it may be inaccurate due to people lying or misunderstanding things.

-Inaccurate information can quickly spread. This has become known as 'fake news.' We should check multiple sources that we can trust to verify information.
